SUMMARY

Mobile engineer with **5 years building and shipping cross-platform applications in React Native and Expo**, currently leading mobile delivery at a product company. I own the React Native surface end-to-end — architecture, state management, performance, release engineering — and integrate it across microservice backends in collaboration with the backend team. My background is deliberately broad for a mobile engineer: **Node.js and PostgreSQL** on the server side, **Docker** and CI/CD with Jenkins and SonarQube, and a genuine focus on **authentication and application security** (OAuth 2.0 / SSO, JWT, plus three ISO/IEC 27001:2022 ISMS courses). I also care about the team around the code: as a **PSM II Scrum Master and L&D Executive** I recruited, trained and mentored engineers, ran an internship program, and wrote the engineering-methodology manuals my colleagues worked from. Looking for a stable product team where I can go deep, raise engineering standards, and mentor.

CORE SKILLS

- **Mobile (primary):** React Native · **Expo** (Expo Router, prebuild/CNG, EAS Build & Submit, Dev Client) · TypeScript · JavaScript · iOS & Android release · OTA updates (EAS Update, CodePush, Stallion) · Flutter/Dart (second stack)
- **Architecture & state:** Redux · Zustand · React Query (server-state) · GetX · offline/caching strategy · deep linking · native-module integration · performance profiling (list virtualization, re-render control, startup time)
- **Backend & data:** Node.js — **Express**, HapiJS · **PostgreSQL** · REST API design & integration · GraphQL · Supabase (managed Postgres, auth, storage) · MySQL · Firebase
- **Auth & security:** **OAuth 2.0** · multi-provider social sign-in / SSO · JWT & token-based auth · refresh-token flows over HttpOnly cookies · secure token storage on device · **ISO/IEC 27001:2022 ISMS** (Requirements · Awareness & Implementation · Internal Auditor) + ISO 19011:2018 auditing methodology
- **DevOps & quality:** Docker & containerized local development · CI/CD (Jenkins, EAS pipelines) · SonarQube quality gates · Git · conventional commits · code review · React Native Testing Library · Flutter Test · Sentry-style crash monitoring & release triage
- **Cloud exposure:** Supabase · Firebase · Heroku · AWS services exercised locally through LocalStack (SQS, DynamoDB) during backend integration work — *see "Growth areas" below*
- **Ways of working:** **PSM II** (Scrum.org) · Agile delivery, estimation & sprint tracking · Jira · cross-functional collaboration with Product, Design and Backend · mentoring & technical training · English (professional working proficiency; daily written technical English) · Vietnamese (native) · Japanese (beginner)
- **AI-assisted engineering:** daily Claude Code and purpose-built Claude Skills for building, reviewing and refactoring

EXPERIENCE

CVTOT JSC — Mobile Leader

Mar 2025 – Present

- **Hands-on lead for the company's two shipped products**, owning the React Native (Expo) client end-to-end and integrating it across the backend platform in collaboration with the backend team:
 - **TalentAxis** (recruitment SaaS) — Expo client against a Django/FastAPI microservices platform; token-based auth with **multi-provider social sign-in (OAuth 2.0)** and in-app purchases. [Shipped to the App Store](#).
 - **Space360** (property/space management) — Expo client in a Turbo monorepo alongside a Vite/React web app on Supabase (Postgres, auth); payment integration via VietQR. [Shipped to the App Store and Google Play](#).

- **Release engineering:** own the full release pipeline — EAS Build/Submit, store submissions and review responses, versioning, staged rollout and **OTA updates** (Stallion); set up and administer the Apple and Google developer accounts including company D-U-N-S registration.
- **Production troubleshooting:** diagnose issues across the mobile client and its API boundary — including a deep investigation of an **OAuth refresh-token flow delivered over HttpOnly cookies**, isolated with a hand-built request test matrix until a single root cause remained.
- Also delivered a **live-streaming product** with React Native, Stallion (OTA) and NodeMedia.
- **Standards & process:** introduced Agile delivery (estimation, sprint tracking) improving delivery speed and quality; enforced quality gates; **documented engineering methodology into technical manuals** used by the wider team; AI-first delivery with Claude Code.

Enouvo IT Solutions — Learning & Development Executive

Oct 2022 – Dec 2024

- **Scrum Master, Innovation team** (Oct 2023 – Dec 2024): facilitated the full Scrum cycle, removed impediments and drove process improvement; partnered with the Product Owner on backlog prioritization; managed the lifecycle from planning and analysis through development, test and release.
- **Coordinator, Enouvo Internship Program** (Jul 2023 – Dec 2024): ran the program end-to-end — recruited candidates, led training sessions as facilitator, coached individuals and teams, and developed engineers' technical skills. **Coached a colleague to PSM II certification.**
- Built cross-functional communication (daily sync, workshops) and a culture of candid feedback and trust.

Enouvo IT Solutions — Mobile Engineer (Flutter)

Jan 2022 – Jul 2023

- Built cross-platform applications with Flutter/Dart and GraphQL; set up **Jenkins CI** and **SonarQube** quality gates.
- **Mentored junior developers** on mobile-engineering best practices through code review and regular sessions.

Mobile Engineer (Freelance) — during military service

Sep 2020 – Jun 2021

- Continued client mobile-engineering work as freelance projects up to and during military service.

Enouvo IT Solutions — Mobile Engineer (React Native)

Feb 2018 – Feb 2020

- Built React Native applications with **JavaScript, Express (Node.js), PostgreSQL, JWT and REST APIs**, deployed on Heroku.
- **Reduced application crashes significantly** by identifying root causes of instability and shipping targeted fixes.
- Worked directly with clients on requirements and goals; estimated and tracked work in Scrum.

FPT Software — Java Intern

Jun 2017 – Aug 2017

- Full development lifecycle; REST API and MySQL integration.

CERTIFICATIONS & EDUCATION

- **B.Eng. Information Technology – Software Engineering (PFIEV)**, Danang University of Science & Technology (2014–2019) — *Vietnam–France elite engineering program. Thesis: DanaQueue, an administrative-procedure queueing system — React Native client, ReactJS admin, HapiJS (Node.js) API, PostgreSQL, Firebase notifications.*
- **Professional Scrum Master II (PSM II)** — Scrum.org, Sep 2023
- **ISO/IEC 27001:2022 ISMS** — BSI Training Academy Vietnam (2023–2024): Requirements · Awareness & Implementation · Internal Auditor; plus **ISO 19011:2018** internal-auditing methodology
- **Scrum Foundation Professional Certificate (SFPC)** — Certiprof, Feb 2022

GROWTH AREAS (STATED PLAINLY, BECAUSE I WOULD RATHER BE ACCURATE THAN IMPRESSIVE)

I have not yet worked with **NestJS** (my Node.js experience is Express and HapiJS), and my cloud experience is adjacent rather than production **AWS/GCP** — Supabase, Firebase, Heroku, and AWS services exercised locally via LocalStack. These are the two areas I most want to grow into, and they are a large part of why this role interests me.
